INTELLIGENT EMERGENCY BRAKING & WARNING ASSISTANTS

LOOKS GOOD, LOOKS AHEAD.

Thanks to innovations like Automatic Emergency Braking¹, being on the road is now much safer for you and others.

¹Optional on SC and SE, standard on Ultimate models. Automatic Emergency Braking with Pedestrian Detection works automatically above 5km/h and below 85km/h. From 5 to 30km/h the deceleration metric to reduce the impact speed of the collision is 0.9g. From 30 to 85km/h the system reduces the speed by a maximum of 22km/h. Above this threshold, the driver needs to brake himself/herself to reduce the speed even further. Operational speed range of Automatic Emergency Braking with Pedestrian Detection depends on the detected obstacle (mobile obstacle: from 5 to 85km/h; fixed obstacle: from 5 to 80km/h; pedestrian: from 5 to 60km/h). Opel driver assistance systems are intended to support the driver within the limitations intrinsic to the system. The driver remains responsible for the driving task. ²Optional on all models in conjunction with Navi 5.0 IntelliLink.

If you overlook something important, your car reacts:

- **Traffic Sign Recognition** detects and then displays speed limits
- **Lane Departure Warning** helps stop unintentional drifting
- **Automatic Emergency Braking¹** is able to independently recognise dangerous situations, brake the car and for speeds of up to 30km/h even bring it to a complete standstill
